Backstroke Flag Assembly Instructions

STRINGING FLAGS

- You may wish to lay the flags out in the order of the assembly to ensure lane numbers or letters appear in the proper location.
- To assist in stringing the flags, you may wish to cut and straighten a piece of coat hanger approximately 18 inches long.
- Tape one end of the nylon cord to the end of the coat hanger.
- Use the straightened hanger piece as a needle to thread the cord through each of the flag's casing.
- **Note:** Be sure all flags are facing in the same direction.

HARDWARE ATTACHMENT

- Once the flags are completely strung, fasten one end of the cord to the swivel hook.
- Using a square knot, attach this end to one of the backstroke flag anchoring points and stretch the loose end across the pool to the opposite anchoring point.
- Attach a swivel hook on the anchoring point and loop the cord through the swivel hook eyelet.
- Pull the cord tight and tie it off with a square knot to complete the assembly.
- **Note:** You may occasionally need to retighten the cord due to the stretching nature of the nylon material.
